Nebraska Bank Group Partners with DCI for Growth

– Cattle National Bank & Trust Co. leads group core change for responsive business partnership –

HUTCHINSON, Kan., May 14, 2010 – DCI, a provider of full-service bank technology and processing solutions to the financial industry, announced that a group of seven separately and independently owned banks, led by Seward, Neb.-based Cattle National Bank & Trust, have simultaneously partnered with DCI to implement iCore360®, the company's newly reengineered native .NET framework core processing system for all seven institutions.

In addition to Cattle National Bank & Trust Co., the group includes, Curtis State Bank, Curtis, Neb.; Battle Creek State Bank, Battle Creek, Neb.; Oak Creek Valley Bank, Valparaiso, Neb.; The State Bank of Bartley, Bartley, Neb.; Bank of Elgin, Elgin, Neb.; and Western National Bank, Summerfield, Kan.

Ryne Seaman, president of Cattle National Bank & Trust Co., along with members of his management team, Vice President Chris Schmit and Vice President Mike Klintworth, led the group's search for a new core processor with a focus on long-term growth using newer technology and a collaborative business partnership.

"We're looking forward to our growth potential," said Seaman. "iCore360° is at the forefront of core technology and DCI is a responsive business partner willing to work shoulder to shoulder with us. We like that DCI is owned by many of their client banks, with bank officers as board members, and a strategic vision driven by bankers," added Seaman.

DCI also boasts a unique development methodology, which involves users in product enhancements, encourages more flexible design and user control.

"DCI prides itself on creating innovative technology that helps banks serve customers better," said John Jones, president and CEO of DCI. "But more important is the collaborative partnership with our clients, that makes us more responsive to their needs and input. We look forward to a long, supportive relationship with this group of forward-thinking bankers."

The bank group also has high expectations for the iCore360° processing system. iCore 360° runs on a standard Internet browser and PC with no special hardware or software required. iCore360° utilizes a relational Oracle database and other workflow automation features that allow banks to more easily control customer information, customize the system, and create unique bank products.

“Ultimately it’s about serving the customer best and providing them with the leading-edge technology that they’re demanding,” said Seaman. “iCore360° will help us do that.”

About Cattle National Bank & Trust Co.
